Fincap Solutions

Joint venture of Computech Corporation and CapitalFusion Partners

FinPricer

FinPricer - *A Comprehensive Technology Solution for Pricing and Risk Analysis*:

A desktop and network-based Distributed Processing System, this database-driven Enterprise System can be scaled to meet the needs of small hedge funds as well as major market dealers. FinPricer is a versatile and easy to use tool for both front office and middle-office functions.

The FinPricer solution is a comprehensive Microsoft Technology (C#)-based application for valuing, and managing risk of structured finance products. Its underlying industry standard models are powered by the state-of-the-art high performance Intex analytics and it is designed to integrate seamlessly into Intex's database and cash flow engine. FinPricer runs using a user-provided loan level prepay model, a loan level loss model as well as a custom interest rate generator. To access the Intex database and cash flow engine, Computech can also help customers obtain a license from Intex.

Through intuitive and customizable reports, the application makes it easy to:

Value ABS

- Quick Comparative Analysis of ABS
- Generates cash flows on multiple deal with multiple scenario simultaneously
- User Interface (UI) redesigns and customization as per customers request
- Easy to use- User Interface (UI) allows analysts to integrate third party Mortgage-Backed Securities (MBS) applications with already existing prepay and loss models
- Supports multiple monitors with multiple windows to view data easily: A feature that is key to making the workflow faster
- Company specific extensions to the User Interface (UI) available upon request
- Consulting services available to easily integrate any third party data software modules

The integration of Intex's deal model libraries and cash flow generation functionalities into the FinEngines application FinPricer offers:

- Traders to easily price bonds using loan level models.
- FinPricer coupled with Fin*Compute Server a distributed computing solution which enables end users to perform parallel processing of various financial computations (pricing of several deals and scenarios) Portfolio becomes an ideal choice for most portfolio managers.
- FinExcel solution would help you re-evaluate the cash flow generated using Intex data by access other third party loan or pool level database like Loan Performance or MBSData and replacing the collaterals for generating comparative cash flow reports.

Business Problems Solved:

- True distributed computing versus simple batch system which is time consuming & redundant process
- Real-time sharing of business critical reports
- Considerably low cost compared to running a system built in-house
- Run analysis on several hundred deals using a distributed system effortlessly
- Collateral replacement features helps replace loan level data from other third party data providers within Intex deals
